Portfolio: www.damianreeve.dev

PROFESSIONAL SUMMARY

Senior Full-Stack Developer with 9 years of experience architecting, building, and scaling high-performance web platforms for SaaS, enterprise, and product-led environments. Deep expertise across modern frontend and backend ecosystems, including React, Next.js, Node.js, NestJS, PostgreSQL, Prisma, GraphQL, and cloud-native delivery on AWS. Proven record of leading cross-functional engineering initiatives, designing microservices-based systems, improving release velocity through CI/CD automation, and delivering measurable gains in performance, reliability, and developer productivity. Recognized for combining strong system design capabilities with product thinking, clean engineering standards, and effective collaboration across global teams.

SKILLS

Frontend: React, Next.js, JavaScript, TypeScript, HTML5, CSS3

Backend: Node.js, NestJS, Express.js, GraphQL, REST API, Microservices

Databases & ORM: PostgreSQL, Prisma, Redis, SQL, Data Modeling

Cloud & DevOps: Docker, AWS, CI/CD, GitHub Actions, Linux, Nginx

Architecture & Engineering: Distributed Systems, API Design, Performance

Optimization, Authentication & Authorization, Scalability, Testing, Agile Delivery

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer | Northstar Cloud Systems | Seattle, WA | Mar 2022 – Present

- Led end-to-end architecture and delivery of a multi-tenant SaaS platform using React, Next.js, NestJS, PostgreSQL, and Prisma, supporting more than 120 enterprise clients across multiple regions.
- Decomposed key backend domains into microservices, improving service isolation, reducing incident blast radius, and increasing deployment reliability by 38%.
- Designed GraphQL and REST API layers for customer management, billing, permissions, and analytics workflows, reducing frontend integration complexity and improving development speed.
- Optimized database access patterns, indexing, and caching strategies, lowering average API response times by 42% under production workloads.
- Implemented CI/CD pipelines with Docker and AWS-based deployment workflows, cutting release time from 90 minutes to under 20 minutes and enabling more frequent production releases.
- Mentored 5 engineers through code reviews, architecture planning, and engineering standards, helping improve sprint predictability and code quality across the team.

Full-Stack Developer | Elevate Digital Labs | San Francisco, CA | Jan 2019 – Feb 2022

- Built and maintained scalable product features for B2B and SaaS applications using React, Node.js, NestJS, PostgreSQL, and GraphQL.
- Delivered a modern admin portal and customer-facing dashboard that increased user task completion rates by 27% and reduced support-related UI friction.
- Introduced Prisma-based data access patterns and schema refactoring practices that improved query maintainability and reduced backend defects by 24%.
- Collaborated with DevOps engineers to containerize services with Docker and streamline staging and production deployment flows.
- Integrated secure authentication, role-based authorization, and audit logging across internal tools and external-facing applications.
- Worked closely with product and design stakeholders to translate requirements

into technical solutions with clear delivery milestones and measurable business impact.

Software Engineer | BluePeak Interactive | Austin, TX | Jul 2016 – Dec 2018

- Developed full-stack web applications using React, Node.js, Express.js, and PostgreSQL for clients in e-commerce, operations, and workflow automation.
- Created reusable frontend components and modular backend services that reduced duplicated implementation effort and shortened feature delivery cycles by 22%.
- Built REST APIs for reporting, user management, and transactional workflows, supporting responsive and reliable client-side integrations.
- Improved application stability by resolving recurring production issues, strengthening error handling, and adding test coverage to critical flows.
- Participated in agile sprint planning, technical estimation, and peer reviews, contributing to stronger engineering consistency across projects.

Junior Full-Stack Developer | PixelMint Technologies | Portland, OR | Jun 2014 – Jun 2016

- Supported the development of responsive web applications using JavaScript, React, Node.js, and SQL-based backends.
- Assisted with API integration, UI implementation, and bug fixing across internal products and client projects.
- Helped maintain code repositories, deployment scripts, and shared development utilities that improved day-to-day team efficiency.
- Collaborated with senior engineers on feature implementation, debugging, documentation, and QA handoff processes.

PROJECTS

AI Resume Analyzer

Tech Stack: Next.js, Node.js, NestJS, PostgreSQL, Prisma, AWS

- Built an AI-powered platform that ingests resumes, extracts structured candidate data, and evaluates profile relevance against job requirements.
- Designed backend services for file processing, scoring logic, user sessions, and recruiter-facing analytics with clean API boundaries and scalable persistence.
- Improved resume processing throughput and reduced manual screening effort by enabling structured comparison, filtering, and ranked candidate insights.

Multi-Tenant SaaS Platform

Tech Stack: React, Next.js, NestJS, PostgreSQL, Prisma, Docker, AWS, CI/CD

- Architected a tenant-aware SaaS application with isolated account structures, role-based access control, subscription workflows, and usage analytics.
- Implemented scalable deployment and environment management patterns that supported reliable onboarding of new clients with minimal operational overhead.
- Increased platform maintainability through modular service boundaries, shared component libraries, and automated release pipelines.

Real-Time Collaboration Tool

Tech Stack: React, Node.js, GraphQL, PostgreSQL, Docker

- Developed a collaboration platform for shared editing, comments, activity tracking, and synchronized team workflows.
- Built performant APIs and event-driven backend coordination patterns to support low-latency updates and consistent shared state across users.
- Enhanced team productivity by enabling faster review cycles, centralized feedback, and improved visibility into active project work.

EDUCATION

Bachelor of Science in Computer Science

University of Washington | Seattle, WA

CERTIFICATIONS

- AWS Certified Developer – Associate
- Docker & Kubernetes: The Practical Guide
- GraphQL with React and Node.js Certification

ACHIEVEMENTS

- Led modernization of a legacy monolithic application into modular services, improving release frequency by over 40%.

- Reduced infrastructure and deployment friction through CI/CD automation, helping engineering teams ship features faster with fewer rollback incidents.
- Consistently recognized for technical leadership, cross-functional collaboration, and building scalable systems aligned with product growth goals.
